

IN THE CLAIMS:

Add the following Claim:

1 7. In a system for holding a parallel in place against the front of a jaw
2 member secured to a vise head, the improvement comprising:
3 a pair of slots formed on the back of the jaw member on either side thereof;
4 an opening made in the vise head immediately adjacent to the respective slot
5 formed on either side of the jaw member; and
6 a pair of clip members each integrally formed along the length thereof having an
7 intermediate hook section adapted to engage a respective one of the slots
8 through the opening in the vise head and a forward cap section to clamp
9 flush against the parallel upon the front of the jaw when the hook section is
10 engaged with the respective slot.
